

MEASURE THE KITCHEN SPACE

It's important to take your time and make sure your measurements are correct as this will form the foundation of all your planning. To get started, you'll need a tape measure, pencil and grid paper.

1. Start from the left corner of the wall and head in a clockwise direction. Measure from one edge of the wall to the other, skipping over any windows, fixtures and appliances. Label each wall "Wall 1", "Wall 2", etc. and record the dimensions in inches.
2. Once the wall measurements have been recorded, measure all windows and doors, from one outside trim edge to the other outside trim edge and record your measurements on the floor plan.
3. Next, indicate vents, pipes or other obstructions that cannot be moved. Then, record all appliances power sources, water supply, electrical outlets and light switches. Mark the location and center point of all your permanent fixtures.
4. Write down vertical measurements, from floor to the windowsill, from windowsill to the top of the window, and from the top of the window to the ceiling. If you have a dropped ceiling or bulk heads, make sure to include those measurements as well.
